

Growing presence at seven major UK airports

As an innovative provider of integrated energy solutions and a leader in the UK's decarbonisation journey, our aviation customers can rely on EET Fuels to help them achieve their energy transition objectives.

EET Fuels' Stanlow Manufacturing Complex is already one of the most technically advanced refineries in Europe. And with over \$1.2 bn worth of strategic investments, we're not only making it the UK's first low carbon process refinery but also home to the UK's largest bulk liquid storage and bio-fuels hub.

As one of the largest manufacturers of aviation fuels in Europe, we supply our high-quality jet fuels to the aviation sector, on both a wholesale and direct-to-plane basis via our road terminals, direct pipelines to Manchester Airport, and also via the UK Oil Pipeline (UKOP) network and Oikos Storage at Canvey Island.

At EET Fuels, we understand that society's demands are changing and as a UK manufacturer, we are focussed on meeting the current and future needs of British industry and consumers.

We recognise the importance of providing a resilient supply chain of high-quality products manufactured in a lower carbon way and developing long-term partnerships based on value, innovation and trust.

With a wing-tip supply offering at seven UK airports, some of the biggest names in the global commercial aviation sector, international oil companies and traders trust EET Fuels for their fuelling requirements
