

Powering today

Committed to improving operations to deliver the highest standards.
Supplying more than 16% of the UK's road transport fuel demand.
Producing over 9 billion litres of fuel annually.

What you need, when you need it

Essar Energy Transition Fuels is one of the largest suppliers of automotive, industrial, agricultural, and domestic fuels. We serve a wide network of independent resellers and distributors across the UK.

Operating from our Stanlow refinery and other strategically located sites across the UK, we meet the nation's energy demands through a fully integrated infrastructure comprising an extensive pipeline network, a versatile distribution system, and a dedicated fleet of vessels.

Stanlow features one of the most efficient loading terminals in Western Europe, equipped with 17 modern loading gantries and excellent gate-to-gate turnaround times. It also houses the UK's largest independent bulk liquid storage facility, with a capacity of approximately 3 million cubic metres.

Leading tomorrow

Eliminating 2.1 million tonnes of carbon dioxide emissions.
Equivalent to removing 1 million cars from the road each year.
Investment pipeline of around \$1.2bn in the North West of the UK.

Setting the benchmark globally for low emitting refineries

We are committed to becoming the UK's first low carbon process refinery, with a planned investment of \$1.2 billion to reduce emissions through the decarbonisation of our production processes.

We are at the heart of HyNet, the UK's leading industrial decarbonisation cluster.

We are committed to evolving Stanlow into a premier energy transition hub, aiming to achieve a significant reduction in emissions through a comprehensive, phased development strategy that consists of three stages:

- Energy efficiency
- Fuel switching
- Carbon capture
